Mit der monatlich erscheinenden Veröffentlichung *Eurostatistik - Daten zur Konjunkturanalyse* werden innerhalb kürzester Frist die neuesten statistischen Daten über die Europäische Gemeinschaft als Ganzes (EUR12), über jedes Mitgliedsland sowie über die Vereinigten Staaten und Japan bekanntgegeben.

Eurostatistik enthält nicht die Gesamtheit des bei Eurostat verfügbaren statistischen Materials, sondern eine Auswahl der relevantesten Reihen über die konjunkturelle Entwicklung.

Schnelligkeit und Pünktlichkeit sind die wichtigsten Vorzüge dieser Veröffentlichung.

Aus diesem Grunde wurde sie im Umfang bewußt klein gehalten und enthält keine Anmerkungen zur Methodik, die im übrigen in den spezialisierten Veröffentlichungen von Eurostat zu finden sind.

Die in *Eurostatistik* veröffentlichten Daten stammen aus dem ICG -Bereich der On-line-Datenbank Cronos von Eurostat.

Wer Zugang zu Cronos besitzt, kann jederzeit die Tabellen dieser Veröffentlichung abfragen, wobei die Daten täglich auf den neuesten Stand gebracht werden (Hinweise zur On-line -Benutzung finden sich auf der letzten Seite). Darüber hinaus sind die Daten in der Datenbank Eurocron verfügbar, die vom Host Eurobases der Kommission angeboten wird.

Weitere Informationen über *Eurostatistik* können bei folgender Stelle angefordert werden:

Die qualitative Verbesserung der in *Eurostatistik* veröffentlichten statistischen Information wird im Laufe des Jahres 1993 abgeschlossen. Änderungen werden während des Jahres miteinbezogen. Bereits ab diesem Monat soll die veränderte Gestaltung die Lektüre erleichtern und eine bessere Übersicht gewährleisten.

WECHSELKURSE: Irisches Pfund erneut unter Druck

Nachdem das irische Pfund zu Beginn des Monats spekulativem Druck stand halten konnte, geriet es am 27. Januar infolge der Senkung der britischen Zinsen vom 25. Januar (siehe unten) und der daraus resultierenden Pfundschwäche auf den Devisenmärkten erneut unter Druck. Irland, das 30 % seines Außenhandels mit dem Vereinigten Königreich abwickelt, ist besonders stark von der Entwicklung der britischen Währung abhängig. Auf die Schwäche des irischen Pfundes reagierte die Zentralbank des Landes mit höheren Zinsen. Der Tagesgeldsatz wurde auf 100 % heraufgesetzt und erreichte damit wieder seinen Stand von Anfang Januar.

Dem jüngsten Druck auf die irische Währung vorausgegangen war von Mitte bis Ende Januar eine Beruhigung der Spannungen innerhalb des Wechselkursmechanismus, wobei sich die vorher schwachen Währungen erholen konnten.

Zu Beginn des Monats waren verschiedene Währungen stark unter Druck geraten. Nachdem das irische Pfund am 7. Januar gegenüber dem belgischen Franc und dem holländischen Gulden unter seinen unteren Interventionspunkt gefallen war, setzte die irische Zentralbank ihren kurzfristigen Interventionsatz von 50 % auf 100 % herauf. Dieser „Strafzins“ erwies sich als hoch genug, um kurzfristig die gegen das irische Pfund gerichtete Währungsspekulation zu unterbinden, so daß die irische Zentralbank diesen Satz zunächst auf 30 % und später dann auf sein ursprüngliches Niveau von 15 % zurücknehmen konnte. Angesichts einer im November 1992 zu verzeichnenden Inflationsrate von nur 2,3 % waren die kurzfristigen Zinsen damit jedoch noch immer extrem hoch. Die irischen Behörden wurden in ihrem Bemühen um die Stützung ihrer Währung von der belgischen und der niederländischen Zentralbank unterstützt, die am 7. Januar ihre wichtigsten Ausleihsätze, einschließlich des Diskontsatzes, um 0,25 % senkten. Zuvor hatten die kurzfristigen Geldmarktsätze in Deutschland nachgegeben, da die Bundesbank ihren Zinssatz für Wertpapierpensionsgeschäfte von 8,75 % auf 8,6 % zurücknahm. In Belgien und den Niederlanden wurden die Zinsen am 19. Januar nochmals leicht gesenkt, und die dänische Zentralbank setzte den Zinssatz, zu dem sie den Geschäftsbanken 14tägiges Geld zur Verfügung stellt, um 1 % auf 12 % herab. Am 23. Januar senkte der Banco de España seinen Geldmarktingterventionsatz, der seit dem 23. November 1992 bei 13,75 % gelegen hatte, um 0,5 % auf 13,25 %.

Das Pfund Sterling, das seit Anfang Januar zu über 2,50 DM gehandelt worden war, dem höchsten Kurs seit unmittelbar nach seinem Ausscheiden aus dem Wechselkursmechanismus Mitte September, verlor Ende Januar erneut an Wert, da zu Befürchtungen, daß die Schwäche der britischen Wirtschaft anhalten könnte, am 26. Januar eine einprozentige Zinssenkung hinzukam. Die Basisausleihsätze der britischen Banken liegen jetzt bei 6 %, dem niedrigsten Stand seit 15 Jahren, und noch vier Prozentpunkte unter ihrem Niveau von September 1992. In den zwei auf die Zinssenkung folgenden Tagen fiel das Pfund Sterling gegenüber der D-Mark um 6 Pfennig und notierte am 27. Januar mit 2,3975 DM, nicht weit entfernt von seinem historischen Tiefstand.

Die italienische Lira, deren Teilnahme am Wechselkursmechanismus ebenfalls im September ausgesetzt wurde, entwickelte sich gegenüber der D-Mark in letzter Zeit unbeständig. Während ihr D-Mark-Kurs, nachdem die Banca d'Italia den Diskontsatz Ende 1992 um einen Prozentpunkt erhöht hatte, rückläufig war, zog er aufgrund der Attraktivität von Lira-Anlagen mit relativ hoher Rendite später wieder an.

Beim Dollarkurs setzte sich der vorherige Aufwärtstrend im Dezember und Januar nicht fort, wenngleich die Entwicklung im Berichtszeitraum unbeständig verlief.

In den letzten Januarwochen ging der Kurs der amerikanischen Währung gegenüber der D-Mark kräftig zurück und lag am 25. Januar bei 1,57 DM, das sind 7 Pfennig weniger als zu Beginn des Jahres. Dieser Rückgang wird auf die am Markt vorherrschende Erwartung zurückgeführt, daß sich die amerikanischen und die deutschen kurzfristigen Zinsen langsamer als erwartet aufeinander zubewegen werden, da die amerikanischen und die deutschen Behörden ihre Zinsen nur zögernd anheben bzw. senken.

RENDITEN VON STAATSANLEIHEN: Renditen in vielen Ländern weiter rückläufig

Der in den Vormonaten zu verzeichnende Rückgang der Renditen von Staatsanleihen setzte sich im Dezember fort, als die Renditen in fünf der hier betrachteten Länder fielen und in sechs weiteren Ländern mehr oder weniger konstant blieben. Der stärkste Rückgang (–1,2 %) war in den Vereinigten Staaten zu verzeichnen, wo sich die Zinsertragskurve (die das Verhältnis zwischen lang- und kurzfristigen Zinsen ausdrückt) abgeflacht hat. Dies bedeutet, daß die langfristigen Zinsen in den USA erneut niedriger sind als in Deutschland, wo die Renditen von Staatsanleihen im Dezember auf ungefähr dem gleichen Niveau wie im November lagen.

Auch in Frankreich (–0,5 %) und Irland (–0,4 %) sowie in Belgien und Luxemburg (jeweils –0,1 %) waren die Renditen rückläufig.

Nur in zwei Ländern zogen die Renditen von Staatsanleihen im Dezember an, und zwar in Portugal, wo ein leichter Anstieg zu verzeichnen war, und in Italien, wo nach einer Zunahme von 1,3 % Ende 1992 die höchsten Renditen der Gemeinschaft erzielt wurden.¹

GELDVOLUMEN: Im Vereinigten Königreich äußerst geringes M4-Wachstum

Vorläufigen Daten² zufolge ist das auf Jahresbasis umgerechnete Wachstum der Geldmenge M4 im Vereinigten Königreich im Dezember auf 3,7 % zurückgegangen, gegenüber 3,9 % im November. Dies war die niedrigste Wachstumsrate seit Beginn der Aufzeichnungen Mitte der sechziger Jahre. Sie fällt in eine Zeit, in der sich die britische Wirtschaft trotz in den letzten Monaten stark rückläufiger kurzfristiger Zinsen weiterhin in einer Rezession befindet. Wenngleich für die Geldmenge M4 von den britischen Behörden nicht ausdrücklich Zielvorgaben vorgegeben werden, ist ein derart geringes Wachstum des weit gefaßten Geldmengenaggregats dennoch als Indikator für die Schwäche der Binnenkonjunktur zu sehen. Das Wachstum der Geldmenge M0, für die Zielvorgaben vorgegeben wurden, nähert sich dagegen dem bei 4 % liegenden oberen Rand des Korridors, da aufgrund rückläufiger Zinsen die Opportunitätskosten für das Halten von Geldvermögen in Form von Bargeld gesunken sind und daher vermehrt Bargeldbestände – wichtigste Komponente des Aggregats M0 – gehalten werden.

In den Vereinigten Staaten war ein langsames Geldmengenwachstum zu verzeichnen, wobei vorläufigen Zahlen zufolge das auf Jahresbasis umgerechnete Wachstum des

Aggregats M2 im September bei 2,1 % und damit außerhalb des von der amerikanischen Notenbank für 1992 anvisierten Zielkorridors von 2,5 %-5 % lag. Auch in Spanien lag das Geldmengenwachstum unterhalb der angestrebten Zieldaten; während für 1992 ein Zielkorridor von 8 %-11 % vorgegeben war, wuchs das Aggregat ALP im Oktober um 4,5 %.

AMTLICHE WÄHRUNGSRESERVEN: Im November starker Abfluß von Währungsreserven aus Spanien, Belgien, Griechenland und Irland

Die stärksten Abflüsse von Währungsreserven verzeichneten im November 1992 Spanien (–15 %), Belgien (–11 %), Griechenland und Irland (jeweils –10 %).

Die amtlichen Währungsreserven Spaniens lagen Ende November um nahezu 30 % unter ihrem Niveau vom Jahresbeginn, da die Peseta in den Vormonaten an den Devisenmärkten unter Druck geraten war. In der ersten Jahreshälfte hatte Spanien noch einen Reservezufluß zu verzeichnen, so daß Ende Juni nahezu 23 % der Währungsreserven der EG auf dieses Land entfielen, während Deutschland 21 % der Währungsreserven hielt. Die entsprechenden Zahlen für Ende November lagen bei 17 % bzw. 35 %.

Belgien und die Niederlande veräußerten 1992 einen Teil der Goldkomponente ihrer amtlichen Währungsreserven. Belgien verkaufte im März 1992 rund 127 Tonnen Gold und im Juni weitere 202 Tonnen und damit insgesamt rund 17 % seiner gesamten Goldbestände. Die niederländischen Goldverkäufe beliefen sich auf 400 Tonnen oder rund 25 % der Bestände.

Die Zentralbanken halten Gold traditionell als „letzte Zuflucht“, die in Zeiten wirtschaftlicher oder politischer Spannungen Sicherheit bietet. Die jüngsten Spannungen im Nahen Osten und in Mitteleuropa haben sich jedoch nur geringfügig auf den Goldpreis ausgewirkt, und Gold an sich eignet sich weit weniger zum Wechselkursmanagement als Bestände ausländischer Währungen. Dies dürfte der Grund dafür sein, daß die Zentralbanken beginnen, ihre Strategie für die Zusammensetzung der amtlichen Währungsreserven neu zu überdenken.

VIERTELJÄHRliche GESAMTRECHNUNGEN: Drittes Quartal 1992: Stagnation der Wirtschaftsentwicklung in der Gemeinschaft (BIP +0,1 %)

Im dritten Quartal 1992 war die Wirtschaft der Gemeinschaft insgesamt durch eine anhaltende Stagnation des Wirtschaftswachstums (BIP +0,1 %) gekennzeichnet. Da in diesem Quartal erneut keine positive Entwicklung zu verzeichnen war, betrug das Wirtschaftswachstum in den ersten neun Monaten des Jahres lediglich +1,1 % und lag damit weit unter den Vorhersagen für das ganze Jahr. Ausgehend von dieser negativen Entwicklung werden zur Zeit sämtliche jährliche Prognosen nach unten korrigiert. Den meisten Wirtschaftswissenschaftlern zufolge lassen sich nach dem derzeitigen Stand der Dinge Anzeichen für eine kurzfristige Erholung der Weltwirtschaft nur sehr schwer ausmachen, wenngleich in den Vereinigten Staaten bestimmte Indikatoren auf eine Trendwende hindeuten könnten. Die Gründe für diese Phase der Abwärtsentwicklung wurden bereits mehrfach in vorangegangenen Veröffentlichungen erörtert. An dieser Stelle soll jedoch kurz auf die währungspolitischen und finanziellen Spannungen eingegangen werden, die für die zweite Jahreshälfte bezeichnend waren. Diese Spannungen waren der bestimmende Faktor für die Aufwärtsbewegung der Zinsen mit dem Ziel, das Gleichgewicht der Wechselkurse innerhalb des EWS aufrechtzuerhalten. Diese Politik hat sich zweifellos nachteilig auf das Wirtschaftswachstum in der Gemeinschaft ausgewirkt, insbesondere in den Ländern mit Fremdwährungsbeständen wie Italien, das Vereinigte Königreich und Spanien.

Für die anhand des impliziten BIP-Deflators gemessene Preisentwicklung liegen keine gemeinschaftsweiten Daten für das dritte Quartal vor. Ausgehend von den verfügbaren Daten dürfte die Inflationsrate in diesem Quartal jedoch geringfügig unter dem oder höchstens auf dem gleichem Niveau wie im vorangegangenen Quartal liegen.

Für die Entwicklung der Bestandteile des BIP liegen noch keine Daten für die Gemeinschaft als Ganzes vor. Aufgrund der Zahlen für die vier großen Länder ist jedoch festzustellen, daß das dritte Quartal zum einen durch einen deutlichen Rückgang der Investitionen und zum anderen durch eine Erholung des privaten Verbrauchs gekennzeichnet war.

Was die Situation in den Mitgliedstaaten angeht, so ist eine deutliche Abschwächung des Wirtschaftswachstums in Dänemark und Italien (BIP –1,9 % bzw. –0,6 %) zu verzeichnen. Dagegen ist in Deutschland und in den Niederlanden nach einem Rückgang im zweiten Quartal eine Wiederbelebung zu beobachten (BIP +0,5 % bzw. +0,9 %). Im Vereinigten Königreich ist nach drei Quartalen des Abschwungs ein allerdings schwacher Aufwärtstrend erkennbar (BIP +0,1 %). Frankreich dagegen ist auch weiterhin das einzige Land mit einer recht gleichmäßigen, wenn auch nicht sonderlich raschen Aufwärtsentwicklung (+0,4 %).

In den Vereinigten Staaten ist eine deutliche Beschleunigung des Produktionswachstums zu erkennen (BIP +1,0 %), die mit einer Verlangsamung sowohl der vierteljährlichen als auch der jährlichen Inflationsraten (+0,4 % bzw. +2,4 %) einhergeht. Bei den Komponenten der Inlandsnachfrage ist im dritten Quartal ein merkliches Anwachsen des privaten Verbrauchs und des Staatsverbrauchs (+0,9 % bzw. +0,8 %) festzustellen, während sich die Investitionen spürbar abgeschwächt haben (+0,4 %).

Für Japan ist das dritte Quartal durch einen Produktionsrückgang (BIP –0,4 %) sowie eine leichte Deflation (–0,2 %) gekennzeichnet, die für das geringfügige Nachgeben der jährlichen Inflationsrate (–2,0 %) ausschlaggebend war. Bei den Komponenten des BIP war die bemerkenswerteste Entwicklung dieses Quartals der beträchtliche Einbruch bei den Investitionen (–2,1 %), während sowohl der private Verbrauch als auch der Staatsverbrauch durch eine Aufwärtsbewegung gekennzeichnet waren (+0,7 % bzw. +0,5 %).

PREISE : Jahresinflationsrate für 1992 bei 3,7%

Zwischen Dezember 1991 und Dezember 1992 stieg der Verbraucherpreisindex für die Gemeinschaft um 3,7%; dies ist die niedrigste jährliche Inflationsrate seit August 1988 und die niedrigste pro Kalenderjahr seit 1987.

Wie gewöhnlich im Dezember waren die Preissteigerungen gegenüber den Vormonat ziemlich schwach in verschiedenen Mitgliedstaaten: Deutschland 0,1 %, Italien 0,2 %, Spanien 0,3 %, Portugal 0,4 %, während die Gesamtindizes in Frankreich, Belgien und Luxemburg unverändert blieben.

Preisrückgänge wurden festgestellt in Dänemark (–0,2 %), in den Niederlanden (–0,4 %) und im Vereinigten Königreich (–0,4 %). Griechenland verzeichnete eine Preissteigerung von 1,2 %, infolge eines Anstiegs der Preise in verschiedenen Bereichen.

¹ Für Griechenland liegen keine Daten vor, da langfristige Staatsanleihen, für die es einen aktiven Sekundärmarkt gibt, nicht aufgelegt wurden.

² Aus Termingründen werden in dieser Ausgabe keine Dezemberdaten veröffentlicht.

Der Rückgang des niederländischen Index wurde verursacht durch den vorgezogenen Winterschlussverkauf von Kleidung und Schuhe, während der Index des Vereinigten Königreichs infolge niedrigerer Hypothekenzinsen sowie von Preisnachlässen für Autos und alkoholische Getränke fiel.

Die Jahresinflationen für 1992 entsprachen in 8 der 12 Mitgliedstaaten dem EG-Durchschnitt oder lagen darunter und in den vier übrigen Ländern darüber.

Geordnet nach der derzeitigen Inflation in aufsteigender Reihenfolge sind die Raten wie folgt:

	DEZ.92 DEZ.91	DEZ.91 DEZ.90		DEZ.92 DEZ.91	DEZ.91 DEZ.90
Dänemark	1,5%	2,3%	Niederlande	2,9%	4,9%
Frankreich	2,0% ^P	3,1%	Deutschland**	3,7%	4,2%
Irland*	2,3%	3,6%	Italien	4,6%	6,1%
Belgien	2,4%	2,8%	Spanien	5,4%	5,6%
Ver. Königreich	2,6%	4,5%	Portugal	8,4%	8,9%
Luxemburg	2,9%	2,6%	Griechenland	14,4%	18,0%

Die entsprechenden Inflationsraten für die Vereinigten Staaten und Japan liegen bei 2,9 % (3,1 %) bzw. 0,9 % (2,7 %).

* November/November

** Der Verbraucherpreisindex der Bundesrepublik Deutschland bezieht sich weiterhin auf den Gebietsstand vom 3. Oktober 1990.

ARBEITSLOSIGKEIT IN DER GEMEINSCHAFT

Eurostat schätzt die saisonbereinigte Arbeitslosenquote in der Gemeinschaft für Dezember 1992 auf 9,9 %. Sie ist damit im Vergleich zum Vormonat um 0,1 % und im Laufe des Jahres um 0,9 % gestiegen.

Der Jahresdurchschnitt der Arbeitslosenquote in der Gemeinschaft insgesamt liegt 1992 mit 9,5 % um 0,8 % höher als im Jahre 1991 (8,7 %). In den Vereinigten Staaten beträgt der Jahresdurchschnitt 1992 7,4 %, was einer Steigerung um 0,7 % gegenüber dem Vorjahr (6,7 %) entspricht. In Japan (Jahresdurchschnitt 1991: 2,1 %) dürfte die durchschnittliche Arbeitslosenquote im Jahre 1992 nicht über 2,3 % liegen.

Die Zahl der Arbeitslosen nach der ILO Definition wird für das Jahr 1992 in der Gemeinschaft insgesamt auf 14,1 Mio geschätzt, das sind über 1,2 Mio Personen mehr als im Vorjahr. Am stärksten betroffen sind Frankreich (+168 000 Personen, +9 %), die alten Länder der BR Deutschland (+100 000, +9 %), das Vereinigte Königreich (+547 000, +8 %) und Spanien (+218 000, +8 %).

Die Niederlande sind der einzige Mitgliedstaat, in dem sich die Zahl der Arbeitslosen verringert hat (-27 000 Personen, -6 %).

Diese Schätzung der Arbeitslosenquote und der Zahl der Arbeitslosen schaltet die unterschiedlichen nationalen Methoden zur Erfassung der Arbeitslosigkeit weitgehend aus.

Die Einbeziehung der Ergebnisse der vierteljährlichen Arbeitskräfteerhebungen in Italien in die Berechnung des bestgeeigneten Indikators (siehe Seite 7) führt zu leichten Revisionen früher veröffentlichter Daten.

Die Arbeitslosenquote wird geschätzt durch Extrapolation der 1991er Ergebnisse der EG-Arbeitskräfteerhebung in den Mitgliedstaaten. Die Einbeziehung der 1992er Ergebnisse, sobald verfügbar, wird wahrscheinlich zur Revision der Schätzungen führen.

INDUSTRIEPRODUKTION: KONJUNKTURELLE LAGE VERSCHLECHTERT SICH ZUNEHMEND

Die Entwicklung der Industrieproduktion der Europäischen Gemeinschaft (EUR 12) bis Oktober 1992 zeigt, daß die Rezession sich eher verstärkt. Nach wie vor ist vor allem in der Investitionsgüterindustrie eine abnehmende Produktionstätigkeit beobachtbar. Der arbeitstägliche bereinigte Produktionsindex der Industrie (NACE 1-4) belief sich im Oktober für die Europäische Gemeinschaft auf 120,0 (1985=100). Dies entspricht einer Veränderungsrate des Index gegenüber dem Oktoberwert des letzten Jahres von -1,6 %. Für die Investitionsgüterindustrie beträgt die entsprechende Veränderungsrate -4,2 %. Nach Saisonbereinigung beträgt der Produktionsindex für Oktober 113,0, im Januar war er bei 115,0. Verglichen mit dem kumulierten Wert von Mai, Juni und Juli veränderte sich die saisonbereinigte Industrieproduktion in der EG in den letzten drei Monaten August, September und Oktober um -1,0 %.

Für die einzelnen Mitgliedstaaten der EG ergibt sich für die saisonbereinigte Industrieproduktion folgende Veränderungsrate der letzten drei Monate gegenüber den Vormonaten: (in Klammern: Investitionsgüterindustrie) Italien -3,3 % (-2,1 %), Niederlande -1,6 % (-2,0 %), Belgien -1,2 % (geschätzt) (+1,3 %), Dänemark -0,7 % (-1,8 %), Deutschland (West) -0,7 % (-1,1 %), Spanien -0,3 % (geschätzt) (+0,9 %), Griechenland +0,0 % (-5,9 %), Frankreich +0,3 % (+0,4 %), Vereinigtes Königreich +1,2 % (+0,9 %), Irland +3,8 % (geschätzt) (+3,4 %). Demnach sinkt in sehr vielen Mitgliedstaaten die Produktion.

In den USA stagnierte die Industrieproduktion mit 0,0 % (Veränderungsrate der letzten drei Monate gegenüber den Vormonaten); für Japan liegen keine aktuellen Daten vor.

Besonders auffallend war in der EG der markante Rückgang der Automobilproduktion (NACE 35) mit -4,0 % Veränderungsrate der letzten drei Monate gegenüber den Vormonaten.

ZAHLUNGSBILANZ – Gesamttendenzen – vorläufige Zahlen für das zweite Quartal 1992:

Die Leistungsbilanz der Gemeinschaft verschlechterte sich gegenüber dem gleichen Vorjahreszeitraum um 3,2 Mrd. ECU und schloß mit einem Defizit von 15,2 Milliarden ECU ab. Die Leistungsbilanz der Vereinigten Staaten verzeichnete ein Defizit von 12,5 Mrd. ECU, was eine Verschlechterung von 16 Mrd. ECU bedeutet. In Japan stieg der Überschuß um 7 Mrd. ECU auf 22,7 Mrd. ECU.

Die Verschlechterung des Gemeinschaftsergebnisses ist auf das um 7,6 Mrd. ECU gestiegene Defizit der Dienstleistungs- und Übertragungsbilanz zurückzuführen, bei einer Verbesserung der Handelsbilanz um 4,4 Mrd. ECU. Diese Veränderungen sind vor allem auf die deutsche Leistungsbilanz zurückzuführen: Dort stieg der Handelsbilanzüberschuß um 3,5 Mrd. ECU, während sich der Saldo der Dienstleistungsbilanz um 3,3 Mrd. ECU verschlechterte, was zu 50 % auf die Reisebilanz zurückzuführen ist. Im übrigen verbesserte sich die französische Handelsbilanz um 2,5 Mrd. ECU, während sich im Vereinigten Königreich die Handelsbilanz um 1,6 Mrd. ECU und die Dienstleistungs- und Übertragungsbilanz um 2 Mrd. ECU verschlechterte (im zweiten Quartal 1991 hatte das Vereinigte Königreich im Zusammenhang mit dem Golfkrieg beträchtliche Übertragungen erhalten).

In den Vereinigten Staaten schloß die Leistungsbilanz im zweiten Quartal 1992 mit einem Defizit von 12,5 Mrd. ECU ab, nachdem sie im gleichen Vorjahreszeitraum noch einen Überschuß von 3,5 Mrd. ECU ausgewiesen hatte. Das Handelsbilanzdefizit stieg von 11 Mrd. ECU auf 16,3 Mrd. ECU, während der Überschuß der Dienstleistungs- und Zahlungsbilanz von 14,6 Mrd. ECU auf 3,8 Mrd. ECU sank, was wiederum auf erhebliche Übertragungen im Zusammenhang mit dem Golfkrieg zurückzuführen ist. Würde man das Niveau von 1990 zugrundelegen, hätte sich der Saldo der Dienstleistungs- und Übertragungsbilanz eher verbessert.

In Japan betrug der Leistungsbilanzüberschuß im zweiten Quartal 1992 22,7 Mrd. ECU gegenüber 15,7 Mrd. ECU im gleichen Vorjahreszeitraum. Der Handelsbilanzüberschuß nahm um 5,12 Mrd. ECU zu; das Defizit der Dienstleistungs- und Übertragungsbilanz verringerte sich um 3,1 Mrd. ECU.

AUSSENHANDEL

Die Bilanz des außergemeinschaftlichen Handels der Monate Januar bis September 1992 zusammengekommen schloß mit einem Defizit von 45,4 Mrd. ECU ab und verbesserte sich damit um mehr als 15 Mrd. ECU gegenüber dem gleichen Zeitraum 1991. Die Einfuhren in die Gemeinschaft lagen in den ersten neun Monaten des Jahres 1992 um 1,4 % unter dem Ergebnis für den entsprechenden Vorjahreszeitraum, während bei den Ausfuhren ein Anstieg von 3,4 % zu verzeichnen ist.

Das Defizit des außergemeinschaftlichen Handels betrug im September 1992 4,1 Mrd. ECU, gegenüber einem Defizit von 7,3 Mrd. ECU im September 1991. Die Einfuhren in die Gemeinschaft verringerten sich in diesem Zeitraum um 4,3 %, was auf den Rückgang des Preises für Rohöllieferungen in die Gemeinschaft zurückzuführen ist, der in Dollar ausgedrückt gegenüber September 1991 zwar unverändert blieb, in ECU jedoch um nahezu 13 % fiel. Bei den Ausfuhren ist eine Zunahme von 4,2 % zu verzeichnen. Die Differenz zwischen der Entwicklungsrate der Ausfuhren und der der Einfuhren von September 1991 bis September 1992 macht gut 8 Prozentpunkte aus.

Das Handelsbilanzdefizit der Vereinigten Staaten von Januar bis September 1992 belief sich auf beinahe 56 Mrd. ECU, das sind 6 Mrd. ECU weniger als in den ersten neun Monaten des Jahres 1991. Die Einfuhren haben in ECU gerechnet um 2,4 % und damit stärker als die Ausfuhren (0,6 %) zugenommen.

Im September 1992 wies die Handelsbilanz der Vereinigten Staaten einen Fehlbetrag von 8,1 Mrd. ECU aus, das sind rund 1 Mrd. ECU mehr als im September 1991. Die Einfuhren sind in ECU ausgedrückt um 2,4 % zurückgegangen, in Dollar dagegen um gut 10 % gestiegen. Die Ausfuhren verringerten sich in ECU gerechnet um 6 %, während sie in Dollar ausgedrückt um 7 % zugenommen haben.

Die Handelsbilanz Japans weist in den ersten neun Monaten des Jahres 1991 zusammengekommen einen Überschuß von 63,2 Mrd. ECU aus und verbessert sich damit um 18 Mrd. ECU gegenüber dem entsprechenden Vorjahreszeitraum. Die japanischen Ausfuhren sind in ECU gerechnet um 3,2 % gestiegen, während die Einfuhren um 8,4 % zurückgegangen sind.

Im September 1992 schloß die japanische Handelsbilanz mit einem Überschuß von 6,7 Mrd. ECU ab und verbesserte sich damit um 1,6 Mrd. ECU gegenüber dem gleichen Vorjahresmonat. Die Ausfuhren stagnierten in ECU (-0,4 %), nahmen jedoch in Dollar gerechnet um 13 % und in Yen um knapp 5 % zu. Die Einfuhren sind in ECU um 5 % gefallen, während sie in Dollar um 8 % angestiegen sind und in Yen stagnierten.

Die Handelsbilanz Deutschlands schloß im September 1992 insgesamt mit einem Überschuß von 2,7 Mrd. ECU ab, das sind 2 Mrd. ECU mehr als im September 1991. In Dänemark und in Irland wurde jeweils ein Überschuß von 0,5 Mrd. ECU ausgewiesen, wohingegen die Bilanzen der Niederlande und der BLWU beinahe ausgeglichen waren (0,1 Mrd. ECU bzw. -0,2 Mrd. ECU) und sich damit jeweils um 0,5 Mrd. ECU verbessert haben. Portugal und Griechenland weisen einen Fehlbetrag von 0,7 Mrd. ECU bzw. 0,8 Mrd. ECU aus. Das Handelsbilanzdefizit Frankreichs belief sich auf 1,2 Mrd. ECU, während in Italien ein Fehlbetrag von 1,4 Mrd. ECU zu verzeichnen ist, eine Verbesserung um 0,6 Mrd. ECU gegenüber September 1991. Der Gesamtsaldo des spanischen Außenhandels verringerte sich um 0,3 Mrd. ECU und belief sich im September 1992 auf -1,6 Mrd. ECU. Das Vereinigte Königreich hat trotz einer Verbesserung um 0,2 Mrd. ECU gegenüber September 1991 mit -1,9 Mrd. ECU das größte Handelsbilanzdefizit zu verbuchen.

Eurostatistics - data for short-term economic analysis is a monthly publication aimed at providing, as rapidly as possible, the latest statistical data on the European Community as a whole (EUR 12), each Member State, the United States and Japan.

Eurostatistics does not present all the statistics held by Eurostat, but a selection of the most relevant series on the economic situation.

Speed of publication and punctuality are the main features of this publication; that is why it is deliberately streamlined and does not contain any methodological notes, which are given in Eurostat's specialized publications.

The data published in *Eurostatistics* are taken from the ICG domain of Eurostat's on-line database, Cronos (the notes regarding on-line consultation may be found at the end of this publication). They are also available via the Commission host Eurobases in the Eurocron database.

Further information on *Eurostatistics* can be obtained from the following addresses:

Eurostat - Information Office
L-2920 Luxembourg
Tel.: (352) 4301-34567
Fax: (352) 43 64 04

Data Shop
121, Rue Joseph II
Office 3/235

EXCHANGE RATES: Irish punt under renewed pressure

After seemingly withstanding speculative pressures earlier in the month, on January 27 the Irish punt came under renewed attack in the foreign exchange markets, as a result of the cut in British interest rates on January 25 (see below) and the subsequent weakness of sterling. Ireland, which transacts around 30% of its foreign trade with the UK, is particularly vulnerable to weakness of the British currency. The Irish central bank responded to the punt's weakness by increasing interest rates, raising its overnight rate to 100%, a level at which it had stood earlier in January.

Before the latest pressure against the punt, there had been a decline in tensions in the exchange rate mechanism (ERM) of the EMS in mid to late January, with an improvement in the position of the currencies which had previously been weak.

This came after a spell earlier in the month when several currencies came under severe pressure. On January 7, after the Irish punt had been trading at below its ERM floor against the Belgian franc and Dutch guilder, the Central Bank of Ireland raised its overnight intervention rate from 50 to 100%. This penal rate proved to be sufficient to deter further speculation against the currency in the short term, and the central bank was later able to reduce it first to 30% and then back to its original level of 15%. However, even these levels of short-term interest rates are extremely high when compared to an inflation rate in November 1992 of only 2.3%.

The Irish authorities were helped in their defence of the punt by the actions of the Belgian and Dutch central banks in reducing their main lending rates, including the discount rate, by 0.25% on January 7. These moves followed an easing in German short-term money market rates when the Bundesbank announced that its repo rate was being reduced from 8.75 to 8.6%. On January 19 there was a further slight reduction in Belgian and Dutch rates, and the Danish central bank lowered the rate at which it supplies two-week funds to commercial banks by 1% to 12%. On January 23 the Banco de Espana reduced its money market intervention rate by 13.25% from 13.75%, a level at which it had stood since November 23 1992.

Sterling, which since the beginning of January had been trading above DM 2.50, its highest levels since immediately after the suspension of its ERM link in mid-September, depreciated once again in late January, due to fears of the continued weakness of the UK economy being compounded by a 1% cut in interest rates on January 26. UK bank base rates now stand at 6%, their lowest level for 15 years, 4 percentage points lower than in September 1992. In the following two days sterling fell around 6 pennings against the Deutschmark, to close in London on January 27 at DM 2.3975, close to its all-time lows.

The lire, the other currency which suspended its ERM membership in September, has recently had a mixed performance against the Deutschmark. Having depreciated at the start of 1993 following the Banca d'Italia's 1 percentage point cut in its discount rate late in 1992, it later strengthened, due to the attractiveness of relatively high-yielding lire-denominated assets.

The US dollar did not continue its earlier appreciation into December and January, although throughout the period its performance was mixed.

In the last weeks of January it depreciated strongly against the Deutschmark, to stand at around DM1.57 on January 25, some 7 pennings lower than at the beginning of the year. This fall was judged to be a result of market expectations that US and German short-term interest rates will converge at a slower speed than had previously been expected, due to a reluctance on the part of the American and German authorities to raise/decrease rates respectively.

GOVERNMENT BOND YIELDS: continuation of decline in yields in many countries

The decline in government bond yields which has been reported on in recent months continued in December, with yields falling in five of the countries surveyed and remaining roughly constant in six others. The largest fall (1.2%) occurred in the United States, where the yield curve (relationship of long-term to short-term interest rates) has flattened. This means that long-term rates in the US are once again below those of Germany, where government bond yields remained at more-or-less the same level in December as they had been in November.

Yields also fell in France (down 0.5%), Ireland (down 0.4%) and Belgium and Luxembourg (both down 0.1%).

There were only two countries of those surveyed where government bond yields increased in December: there was a slight increase in Portuguese yields, and an increase of 1.3% in Italy, where government bond yields at the end of 1992 were the highest in the EC.¹

MONEY SUPPLY: UK M4 growth at record low

Provisional data² indicate that the annualised growth rate of M4 in the United Kingdom in December 1992 was 3.7%, down from 3.9% in November. This was the lowest recorded growth rate since records began in the late-1960s, and comes at a time when the UK economy continues to be in recession, despite the large falls in short-term interest rates which have occurred in recent months. Although M4 is not explicitly targeted by the UK authorities, such a low growth rate of broad money is an indication of the weakness of the domestic economy. Conversely, the monetary measure which is targeted, M0, is approaching its growth ceiling of 4%, as the opportunity cost of holding monetary wealth in the form of cash has fallen as interest rates have fallen, thus leading people to hold more cash, which is the major component of M0.

Elsewhere, monetary growth is slow in the United States, where provisional data indicate an annualised M2 growth rate of 2.1% in September, below the Federal Reserve's 1992 target range of 2.5-6.5%. In Spain too monetary growth is below its target range, with the growth rate of ALP at 4.5% in October as compared to a 1992 target range of 8-11% growth.

FOREIGN OFFICIAL RESERVES: Large outflows in November from Spain, Belgium, Greece and Ireland

The largest outflows of foreign official reserves in November 1992 were from Spain (-15%), Belgium (-11%), Greece and Ireland (both -10%).

Spain's foreign official reserves at the end of November were down almost 30% on their level at the start of the year, as a result of the pressure the peseta has been under in the foreign exchange market in recent months. In fact, for the first half of the year Spain experienced an inflow of reserves, resulting in it holding almost 23% of the EC's reserves at the end of June, as compared with 21% held by Germany. The comparable figures for the end of November were approximately 17 and 35%.

In 1992 the central banks of both Belgium and the Netherlands sold part of the gold component of their foreign official reserves. Belgium sold around 127 tonnes of gold in March 1990 and a further 202 tonnes in June 1992, a total amount representing around 17% of its total gold holdings. The Dutch sale was of 400 tonnes of gold, representing around 25% of its stock.

Gold has traditionally been held by central banks as a "safe haven", providing security in periods of economic and political tension. However, recent tensions in the Middle East and in central Europe have had little effect on the gold price, and gold itself is far less useful for exchange rate management than stocks of foreign currencies. It is seemingly for this reason that central banks are beginning to rethink their strategy of the breakdown of their official reserves holdings.

QUARTERLY ACCOUNTS: the third quarter of 1992: a stagnation phase for the Community economy (GDP +0.1%).

The third quarter of 1992 was characterized, for the Community economy as a whole, by the continuation of the stagnation phase in the economy (GDP +0.1%). The continuing poor performance in this quarter resulted in growth over the first nine months of the year being +1.1%, clearly below the forecasts made for the year as a whole. On the basis of this negative trend, all the annual forecasts are being revised downward. Most economists believe that it is very difficult at the moment to identify short-term recovery signals for the world economy, even if certain indicators in the United States suggest that some trends will be reversed. The reasons for this negative phase have been dealt with on a number of occasions in this publication. The element which we would like to discuss briefly is the monetary and financial tension which characterized the second part of the year. This tension led to interest rates rising in order that the exchange rates within the EMS should be kept in balance. This policy doubtless had a negative influence on the performance of Community economies, particularly Italy, the United Kingdom and Spain.

As regards the development of prices, measured by the implicit deflator of GDP, we have no information at Community level for the third quarter. All the same, the information which is available suggests that inflation should be slightly down or, at the most, at the same level as in the preceding quarter.

We have no data at Community level for the components of GDP. From information on the four largest countries, one can say that the quarter was characterized by two elements: the further fall in investments and an upswing in private consumption.

As regards the situation in the Member States, there was a clear fall in economic growth in Denmark and Italy (GDP -1.9% and -0.6% respectively), whereas in Germany and the Netherlands, there was an upswing (GDP +0.5% and +0.9% respectively) after a negative second quarter. The United Kingdom, after three quarters with a downward trend, recovered, albeit very slightly (GDP +0.1%). France, on the other hand, is the only country with fairly regular growth even if it is not very pronounced (GDP +0.4%).

In the United States, there was a clear pick-up in the growth of production (GDP +1.0%) accompanied by a slowing down in both quarterly and annual inflation (+0.4% and 2.4% respectively). Of the components of internal demand, the third quarter showed a clear recovery in both private and public consumption (+0.9% and +0.8% respectively), whereas investment clearly slowed down (+0.4%).

For Japan, the third quarter was characterized by a flagging of production (GDP -0.4%) accompanied by slight deflation (-0.2%), resulting in a slight fall in inflation over the year (-2.0%). Of the components of GDP, the outstanding feature of this quarter was the clear fall in investments

(-2.1%), whereas there was a positive trend in both private and public consumption (+0.7% and 0.5% respectively).

PRICES : EC annual inflation for 1992 at 3.7%

Between December 1991 and December 1992 the CPI for the Community rose by 3.7%, which is the lowest annual inflation rate since August 1988, and the lowest rate for a calendar year since 1987.

As usual in December price increases were low in several Member States : Germany 0.1%, Italy 0.2%, Spain 0.3%, Portugal 0.4%, and zero in Belgium, France and Luxembourg. Decreases were recorded in Denmark (-0.2%), the Netherlands (-0.4%) and the United Kingdom (-0.4%). In Greece there was an increase of 1.2%, where there were price rises in many different sectors.

The Dutch decrease was largely due to an early start of the winter sales in clothing and footwear, whilst the UK fall was assisted by sharp reductions in the mortgage rate as well as price reductions for motor vehicles and alcoholic drinks.

Annual inflation rates for 1992 were equal to or lower than the EC-average in 8 of the 12 Member States and above this average in the 4 others.

In order of increasing inflation the figures are as follows:

	DEC.92 DEC.91	DEC.91 DEC.90		DEC.92 DEC.91	DEC.91 DEC.90
Denmark	1.5%E	2.3%	Netherlands	2.9%	4.9%
France	2.0%P	3.1%	Germany**	3.7%	4.2%
Ireland*	2.3%	3.6%	Italy	4.6%	6.1%
Belgium	2.4%	2.8%	Spain	5.4%	5.6%
United Kingdom	2.6%	4.5%	Portugal	8.4%	8.9%
Luxembourg	2.9%	2.6%	Greece	14.4%	18.0%

The corresponding rates for the United States and Japan are 2.9% (3.1%) and 0.9% (2.7%) respectively.

* November/November

** The CPI for the Federal Republic of Germany continues to reflect the geographic borders prior to 3 October 1990.

¹ There are no data available for Greece due to the absence of long-term government bonds which have an active secondary market.

² December data are not published in this issue due to a deadline restriction.

UNEMPLOYMENT IN THE COMMUNITY

The seasonally-adjusted unemployment rate in the European Community is estimated by Eurostat at 9.9% for the month of December 1992. The rate has increased +0.1 percentage points compared with the previous month and +0.9 percentage points compared with the month of December 1991.

The annual average rate of unemployment in the European Community as a whole was 9.5% in 1992, an increase of 0.8 percentage point compared with 1991 (8.7%). In the United States, the average in 1992 was 7.4%, a rise of +0.7 percentage points compared with 1991 (6.7%). In Japan (an average of 2.1% in 1991), the average unemployment rate in 1992, did not exceed 2.2%.

In 1992 (annual average), the number of unemployed persons for the Community as a whole, based on the ILO definition, is estimated at 14.1 million, an increase of more than 1.2 million compared with the previous year.

Between 1991 and 1992, the most significant increases occurred in France (+168,000, +9%), the former Länder of the Federal Republic of Germany (+100,000, +9%), the United Kingdom (+547,000, +8%) and Spain (+168,000, +8%). The Netherlands was the only Member State where unemployment fell (-27,000, -6%).

The unemployment rate and the number of unemployed persons are estimated after correction of the differences between national methods of recording unemployment.

The use of results of the quarterly labour force surveys in Italy to calculate the best monthly unemployment indicator (see page 7) has led to a slight revision of the data published in the previous issues.

The rate of unemployment is estimated by extrapolating the 1991 results of the labour force surveys for all Member States. The introduction of the 1992 results, as soon as they become available, will probably lead to a revision of the estimates.

INDUSTRIAL PRODUCTION: Recession worsens

The latest (October 1992) figures for industrial production in the European Community (EUR 12) reveal a worsening of the recession. In the capital goods industries in particular, production has continued to fall. The index of industrial production (NACE 1-4), adjusted for the number of working days, stood at 120.0 (1985 = 100) for the Community as a whole in October, 1.6% down on the previous October's figure. For the capital goods industries, the index fell 4.2%, giving a seasonally-adjusted production index for the month of 113.0, whereas in January it had stood at 115.0. The seasonally-adjusted EC production index fell by 1.0% in the past three months (August, September and October) compared with the previous three months (May, June and July).

The seasonally-adjusted figures for industrial output in the EC Member States are as follows (rate of change for the past three months compared with the previous three months, with the capital goods industries in brackets): Italy -3.3% (-2.1%), Netherlands -1.6% (-2.0%), Belgium -1.2% (estimated) (+1.3%), Denmark -0.7 (-1.8%), Germany (West) -0.7% (-1.1%), Spain -0.3% (estimated) (+0.9%), Greece +0.0% (-5.9%), France +0.3% (+0.4%), United Kingdom +1.2% (+0.9%), Ireland +3.8% (estimated) (+3.4%). Production is therefore falling in very many Member States.

In the USA, industrial production stagnated at 0.0% (rate of change for the past three months compared with the previous three months); no current data are available for Japan.

The sharp fall in car manufacturing (NACE 35) in the EC was particularly noticeable, 4.0% down for the past three months compared with the previous three months.

BALANCE OF PAYMENTS – world trends – preliminary figures for the second quarter, 1992:

The Community's current account showed a deficit of 15.2 billion (thousand million) ECU, 3.2 bn worse than in the corresponding quarter of 1991. The United States' current balance showed a deficit of 12.5 bn ECU, having deteriorated by 16 bn Japan's current account, in surplus by 22.7 bn ECU, improved by 7 bn.

According to preliminary figures, in the second quarter of 1992 the Community's current balance was in deficit by 15.2 bn ECU, a deterioration of 3.2 bn compared with the second

quarter of 1991. This deterioration is the result of a 7.6 bn worsening in the deficit on invisibles, partially offset by an improvement of 4.4 bn in the balance of trade. These variations are largely due to the German balance which, during the quarter under review, showed an improvement of 3.5 bn on the balance of trade surplus and a deterioration of 3.3 bn on the services account. Half of this came from travel. Elsewhere, France's trade balance improved by 2.5 bn, whilst Britain's balances on both trade and invisibles worsened, by 1.6 bn and 2 bn respectively. During the second quarter of 1991 the United Kingdom had received substantial transfers in connection with the Gulf War.

In the United States the current balance showed a deficit of 12.5 bn ECU, compared with a surplus of 3.5 bn in the corresponding quarter of 1991. The trade deficit was 16.3 bn (11 bn in the second quarter of 1991) and the surplus on invisibles 3.8 bn (14.6 bn). The deterioration in invisibles is essentially due to transfers, which in the second quarter of 1991 were particularly advantageous to the United States because of payments in connection with the Gulf War. If we compare 1992 with the figures for 1990; the balance on invisibles seems to be improving slightly.

Japan's current surplus reached 22.7 bn ECU in the second quarter of 1992, compared with 15.7 bn in the corresponding quarter of 1991. The trade balance improved by 5.1 bn, and the deficit on invisibles narrowed by 3.1 bn.

EXTERNAL TRADE

The cumulative extra-Community trade deficit for January to September 1992 amounted to ECU 45.4 billion, an improvement of more than 15 billion compared with the same period of the previous year. Extra-Community imports in the first nine months of 1992 were 1.4% down on the corresponding period of 1991, while extra-Community exports showed a rise of 3.4%.

In September 1992, the extra-Community trade deficit stood at ECU 4.1 billion, as against 7.3 billion in September 1991. Between these two periods extra-Community imports decreased by 4.3% as a result of the fall in the cost of the Community's crude oil supplies, which remained stable in dollar terms compared with September 1991 but fell by almost 13% in ecu terms. Extra-Community exports went up by 4.2%. The difference between the rates of change for exports and imports between September 1991 and 1992 was more than 8 points.

From January to September 1992 the United States' trade balance was almost ECU 56 billion in the red, a deterioration of 6 billion compared with the first nine months of 1991. Imports rose by 2.4% in ecu terms, far outstripping exports (0.6%).

In September 1992, the United States had a trade deficit of ECU 8.1 billion, almost a billion more than in September 1991. Imports fell by 2.4% in ecu terms, but rose by more than 10% in dollar terms. Exports declined by 6% in ecu terms, but increased by 7% in dollars.

Japan's cumulative surplus from January to September 1992 was ECU 63.2 billion, an increase of 18 billion compared with the same period of 1991. Japanese exports rose by 3.2% in ecu terms, while imports fell by 8.4%.

Japan's trade balance for September 1992 was ECU 6.7 billion in the black, a rise of 1.6 billion over September 1991. Exports stagnated in ecu terms (-0.4%), but went up by 13% in dollars and almost 5% in yen. Imports fell by 5% in ecu terms, but increased by 8% in dollars and stagnated in yen.

In September 1992, Germany had a total trade surplus of ECU 2.7 billion, an increase of 2 billion compared with September 1991. Denmark and Ireland each had a surplus of half a billion ecus. The trade of the Netherlands and the BLEU was almost in balance (ECU 0.1 billion and -0.2 billion respectively), showing an improvement of almost half a billion ecus in each case. Portugal and Greece had deficits of ECU 0.7 billion and 0.8 billion respectively. France's balance of trade was ECU 1.2 billion in the red, while Italy had a deficit of ECU 1.4 billion, which was an improvement of ECU 0.6 billion on September 1991. Spain's total trade deficit improved by ECU 0.3 billion to stand at 1.6 billion in September 1992. The United Kingdom had the biggest deficit at ECU 1.9 billion, despite an improvement of 0.2 billion compared with September 1991.

Eurostatistiques - Données pour l'analyse de la conjoncture est une publication mensuelle qui a pour but de fournir dans les meilleurs délais les données statistiques les plus récentes pour la Communauté européenne en tant qu'ensemble (EUR12), pour les pays membres ainsi que pour leurs principaux partenaires extra-communautaires (États-Unis d'Amérique et Japon).

Eurostatistiques ne publie pas d'une manière exhaustive toutes les statistiques disponibles auprès d'Eurostat, mais les plus importantes parmi celles-ci.

Cette publication se veut rapide et facilement maniable. Pour cette raison, elle ne comporte pas de notes méthodologiques, qui sont par ailleurs disponibles dans les publications spécialisées d'Eurostat.

Les données publiées dans *Eurostatistiques* proviennent du domaine ICG de la base de données Cronos (les instructions pour le mode de consultation on-line se trouvent à la fin de cette publication). Elles sont aussi disponibles dans la base de données Eurocron, accessible par l'intermédiaire du serveur Eurobases de la Commission.

Sauf indications contraires, les données portent sur le territoire de la République fédérale d'Allemagne avant le 3.10.1990, Berlin-Ouest inclus.

TAUX DE CHANGE: la livre irlandaise soumise à des pressions renouvelées

Après avoir apparemment résisté à des pressions spéculatives au début du mois, la livre irlandaise a de nouveau été attaquée, le 27 janvier, sur les marchés des changes étrangers du fait de la baisse des taux d'intérêt britanniques le 25 janvier (voir ci-dessous) et de la faiblesse du sterling qui en a découlé. L'Irlande, dont 30 % environ des échanges se font avec le Royaume-Uni, est particulièrement sensible à la faiblesse de la monnaie britannique. La Banque centrale d'Irlande a réagi à la faiblesse de sa monnaie en augmentant les taux d'intérêt; le taux d'intérêt au jour le jour a été doublé et a atteint le niveau auquel il se situait au début du mois de janvier.

Avant la toute dernière attaque contre la livre irlandaise, on a observé une baisse des tensions au sein du mécanisme des taux de change (MTC) du SME entre le milieu et la fin du mois de janvier, la position des monnaies qui avaient accusé antérieurement une certaine faiblesse, s'étant améliorée.

Cela s'est produit après une période au début du mois au cours de laquelle plusieurs monnaies ont été soumises à des attaques sévères. Le 7 janvier, après que la livre irlandaise se soit négociée en dessous de son cours plancher dans le MTC par rapport au franc belge et au florin néerlandais, la Banque centrale d'Irlande a augmenté son taux d'intervention au jour le jour qui est passé de 50 % à 100 %. Ce taux répressif s'est avéré suffisant pour prévenir une autre spéculation contre la monnaie à court terme et la Banque centrale a été en mesure, ultérieurement, de la réduire une première fois à 30 % et de le ramener ensuite à son niveau initial de 15 %. Toutefois, même ces niveaux de taux d'intérêt à court terme sont extrêmement élevés si on les compare à un taux d'inflation de 2,3 % seulement en novembre 1992.

Dans leur action en faveur de la défense de la livre, les autorités irlandaises ont été aidées par les Banques centrales de Belgique et des Pays-Bas qui ont réduit leurs principaux taux de prêt, notamment le taux d'escompte, de 0,25 % le 7 janvier. Ces mouvements se sont produits après une détente des taux sur le marché monétaire à court terme allemand lorsque la Bundesbank a annoncé que son taux de rémunération (repo) passait de 8,75 à 8,6 %. Le 19 janvier, on a observé une nouvelle et légère réduction des taux belges et néerlandais et la Banque centrale du Danemark a baissé de 1 % le taux auquel elle fournit des fonds à quinzaine aux banques commerciales pour le fixer à 12 %. Le 23 janvier, la Banco de España a réduit son taux d'intervention sur le marché monétaire à 13,25 % alors que depuis le 23 novembre 1992, il se situait à 13,75 %.

La livre sterling, qui depuis le début de janvier s'échangeait à plus de 2,50 DM – niveau le plus élevé qu'elle a atteint immédiatement après la suspension de son lien avec le MTC à la mi-septembre – a une nouvelle fois été dépréciée à la fin janvier, les craintes d'une faiblesse persistante de l'économie britannique ayant donné lieu à une baisse de 1 % des taux d'intérêt le 26 janvier. Les taux de base bancaires britanniques se situent maintenant à 6 % (le taux le plus faible depuis 15 ans), soit 4 points de pourcentage de moins qu'en septembre 1992. Au cours des deux jours suivants, la livre sterling a perdu 6 pennings environ par rapport au deutsche Mark pour cloîtrer à DM 2,3975 à Londres le 27 janvier, soit pratiquement son plus bas niveau historique.

La lire, autre monnaie à avoir suspendu sa participation au MTC en septembre, a récemment accusé une performance médiocre par rapport au deutsche Mark. Ayant été dépréciée au début de 1993 après que la Banque d'Italie ait baissé de 1 point son taux d'escompte à la fin de 1992, elle s'est renforcée ultérieurement en raison de l'attraction exercée par les placements en liras à rendement relativement élevé.

Le dollar US n'a pas continué à s'apprécier comme en décembre ou en janvier bien que pendant toute la période, ses résultats ont été négatifs.

Au cours des dernières semaines de janvier, il s'est fortement déprécié par rapport au deutsche Mark pour se situer à DM 1,57 environ le 25 janvier, soit 7 pennings de moins qu'au début de l'année. On estime que cette baisse est due à des anticipations du marché selon lesquelles les taux d'intérêt à court terme américains et allemands convergeraient à une vitesse moindre que celle prévue antérieurement, du fait de la réticence des autorités américaines et allemandes à augmenter/baisser leurs taux.

RENDEMENT DES OBLIGATIONS D'ÉTAT: poursuite de la baisse des rendements dans de nombreux pays

La baisse des rendements des obligations d'État, observée au cours des derniers mois, s'est poursuivie en décembre: les rendements ont diminué dans cinq des pays enquêtés et sont restés approximativement constants dans six autres. La baisse la plus forte (1,2 %) est intervenue aux États-Unis où la courbe des rendements (rapport entre taux d'intérêt à long terme et à court terme) s'est aplanie. Cela signifie que les taux à long terme des USA sont une fois encore inférieurs à ceux de l'Allemagne où les rendements des obligations d'État sont restés plus ou moins au même niveau en décembre qu'en novembre. Les rendements ont également baissé en France (–0,5 %) en Irlande (–0,4 %) ainsi qu'en Belgique et au Luxembourg (–0,1 %).

Les rendements des obligations d'État ont augmenté en décembre dans deux pays seulement parmi ceux enquêtés: légère augmentation des rendements au Portugal et hausse de 1,3 % en Italie où les rendements des obligations d'État étaient les plus élevés dans la CE à la fin de 1992. (1)

MASSE MONÉTAIRE: au Royaume-Uni, la croissance de M4 à son niveau historique le plus bas

Les données provisoires (2) montrent que le taux de croissance annualisé de M4 au Royaume-Uni est passé de 3,9 % en novembre à 3,7 % en décembre 1992. Il s'agit là du taux de croissance le plus faible enregistré depuis le milieu des années 1960; il se produit à un moment où l'économie britannique poursuit sa récession en dépit des fortes baisses des taux d'intérêt à court terme intervenues au cours des derniers mois. Bien que M4 ne soit pas l'objectif explicite des autorités britanniques, un taux de croissance aussi faible de la masse monétaire au sens large est une indication de la faiblesse de l'économie nationale. Inversement, la croissance de l'agrégat M0 n'a pas dépassé 4 % qui était l'objectif visé étant donné que les coûts d'opportunité de la détention d'actifs liquides ont diminué en même temps que les taux d'intérêt, ce qui a amené le public à détenir davantage de liquidités qui est le composant principal de M0.

Ailleurs, la croissance monétaire est faible aux États-Unis où des données provisoires montrent un taux de croissance annualisé de M2 de 2,1 % en septembre, chiffre inférieur à la fourchette de 2,5-6,5 % de la réserve fédérale visée pour 1992. En Espagne, la croissance monétaire est également inférieure à l'objectif fixé, le taux de croissance d'ALP étant de 4,5 % en octobre contre une fourchette de croissance de 8-11 % visée pour 1992.

RÉSERVES DE CHANGE: fortes diminutions en novembre en Espagne, en Belgique, en Grèce et en Irlande

En novembre 1992, les plus fortes baisses de réserves de change ont été observées en Espagne (–15 %) en Belgique (–11 %), en Grèce et en Irlande (–10 %).

À la fin du mois de novembre, les réserves de change de l'Espagne avaient baissé de près de 30 % par rapport à leur niveau du début de l'année en raison de pressions exercées sur la peseta sur le marché des changes au cours des derniers mois. En fait, pour le premier semestre de l'année, l'Espagne a enregistré une augmentation des réserves car elle détenait près de 23 % des réserves de la CE à la fin du mois de juin contre 21 % détenues par l'Allemagne. Les chiffres comparables pour la fin de novembre sont approximativement de 17 et de 35 %.

En 1992, les Banques centrales de Belgique et des Pays-Bas ont vendu une partie de leur or qu'elles détiennent au titre de réserves de change. La Belgique a vendu près de 127 tonnes d'or en mars 1990 et 202 autres tonnes en juin 1992, soit un montant total représentant 17 % environ de ses avoirs totaux en or. Les Pays-Bas ont vendu 400 tonnes d'or, soit 25 % environ de leur stock.

L'or, traditionnellement détenu par les Banques centrales à titre de «dernière valeur refuge», fournit une certaine sécurité en période de tensions économiques et politiques. Toutefois, des tensions récentes au Moyen-Orient et Europe centrale n'ont que légèrement affecté le prix de l'or et l'or lui-même est bien moins utile pour la mise en œuvre de la politique de change d'un pays que les stocks de devises étrangères. C'est apparemment pour cette raison que les banques centrales ont commencé à revoir leur stratégie de composition de leurs réserves officielles.

COMPTES TRIMESTRIELS: Au cours du troisième trimestre 1992: phase de stagnation de l'économie communautaire (PIB +0,1 %)

Le troisième trimestre 1992 a été caractérisé, pour l'économie communautaire dans son ensemble, par la poursuite de la phase de stagnation de la croissance économique (PIB +0,1 %). A cause de ce nouveau trimestre négatif, la croissance au cours des neuf premiers mois de l'année a été de +1,1 %, largement au-dessous des prévisions faites au niveau annuel. Sur la base de cette évolution négative toutes les prévisions annuelles sont entrain d'être révisées vers le bas. Selon la plupart des économistes, à l'état actuel des choses, il est très difficile d'identifier des signaux de reprise à court terme pour l'économie mondiale, même si certains indicateurs aux États-Unis pourraient faire penser à une probable inversion des tendances en cours. Les raisons de cette phase négative ont été déjà traitées à plusieurs reprises dans cette publication. L'élément sur lequel nous voulons nous arrêter pour une brève discussion est représenté par les tensions monétaires et financières qui ont caractérisé la deuxième partie de l'année. Ces tensions ont déterminé une tendance à la hausse des taux d'intérêt dans le but de maintenir l'équilibre du taux de change à l'intérieur du SME. Cette politique a sans doute influencé de manière négative la performance des économies communautaires, surtout des pays avec des devises comme l'Italie, le Royaume-Uni et l'Espagne.

En ce qui concerne l'évolution des prix, mesurée par le déflateur implicite du PIB, nous n'avons pas de données au niveau communautaire pour le troisième trimestre. Tout de même sur la base des données disponibles, l'inflation au cours du troisième trimestre devrait être en légère baisse ou, à la limite, au même niveau qu'au cours du trimestre précédent.

En ce qui concerne les composantes du PIB, nous ne disposons pas de données au niveau communautaire. Sur la base des données concernant les quatre grands pays on peut affirmer que ce trimestre a été caractérisé par deux éléments: d'un côté la poursuite de la chute des investissements et de l'autre côté une reprise de la consommation privée.

En ce qui concerne la situation dans les États membres on constate un sensible fléchissement de la croissance économique au Danemark et en Italie (PIB –1,9 % et –0,6 % respectivement). Tandis qu'en Allemagne et aux Pays-bas, après un deuxième trimestre négatif, on observe une reprise (PIB +0,5 % et +0,9 % respectivement). Le Royaume-Uni, après trois trimestres de baisse, est marqué par un signe positif même s'il est très faible (PIB +0,1 %). La France, par contre, reste le seul pays avec une évolution assez régulière même si elle n'a pas un rythme extraordinaire (PIB +0,4 %).

Aux États-Unis on observe une sensible accélération du rythme de croissance de la production (PIB +1,0 %) accompagnée par un ralentissement de l'inflation tant trimestrielle qu'annuelle (+0,4 % et +2,4 % respectivement). Parmi les composantes de la demande interne, le troisième trimestre montre une sensible reprise de la croissance de la consommation tant privée que publique (+0,9 % et +0,8 % respectivement), tandis que les investissements sont caractérisés par un sensible ralentissement (+0,4 %).

Pour le Japon, le troisième trimestre est caractérisé par un fléchissement de la production (PIB –0,4 %) accompagné par une légère déflation (–0,2 %) qui détermine une légère baisse de l'inflation au niveau annuel (–2,0 %). Parmi les composantes du PIB le fait marquant de ce trimestre est représenté par la sensible chute des investissements (–2,1 %), tandis que la consommation tant privée que publique est caractérisée par une évolution positive (+0,7 % et +0,5 % respectivement).

PRIX: Le taux d'inflation annuelle en 1992 est de 3,7 %

Entre décembre 1991 et décembre 1992 l'IPC pour la Communauté a augmenté de 3,7 %, ce qui est le taux d'inflation en douze mois le plus bas depuis août 1988, et le taux le plus bas au cours d'une année civile depuis 1987.

Comme toujours en décembre les hausses de prix ont été faibles dans plusieurs États membres: R.F. d'Allemagne 0,1 %, Italie 0,2 %, Espagne 0,3 %, Portugal 0,4 %, tandis que les IPC sont restés inchangés par rapport à novembre en France, Belgique et Luxembourg.

(1) Aucune donnée disponible pour la Grèce en raison de l'absence de rendements des obligations d'État à long terme qui ont un marché secondaire actif.

(2) Les données de décembre ne sont pas publiées dans ce dossier pour des raisons de délais.

Des baisses de prix ont été enregistrées au Danemark (-0,2 %), au Pays-Bas (-0,4 %) et au Royaume-Uni (-0,4 %). La Grèce a enregistré une hausse de 1,2 %, à la suite d'augmentations de prix dans différents secteurs. Le décroissement de l'indice néerlandais est largement dû à l'anticipation des soldes d'hiver de l'habillement et des chaussures, tandis que le recul au Royaume-Uni est accompagné par des réductions des taux hypothécaires ainsi que des réductions des prix des voitures et des boissons alcooliques. Les taux d'inflation annuelle pour 1992 ont été égaux ou inférieurs à la moyenne communautaire dans 8 des 12 Etats membres et supérieurs à cette moyenne dans les 4 autres.

Dans l'ordre croissant de l'inflation actuelle, les chiffres sont comme suit:

	DEC. 92 DEC. 91	DEC. 91 DEC. 90		DEC. 92 DEC. 91	DEC. 91 DEC. 90
Danemark	1,5 %	2,3 %	Pays-Bas	2,9 %	4,9 %
France	2,0 % ^P	3,1 %	Allemagne**	3,7 %	4,2 %
Irlande*	2,3 %	3,6 %	Italie	4,6 %	6,1 %
Belgique	2,4 %	2,8 %	Espagne	5,4 %	5,6 %
Royaume-Uni	2,6 %	4,5 %	Portugal	8,4 %	8,9 %
Luxembourg	2,9 %	2,6 %	Grèce	14,7 %	18,0 %

Les taux correspondants pour les Etats-Unis et le Japon sont 2,9 % (3,1 %) respectivement 0,9 % (2,7 %).

* Novembre/Novembre

** L'IPC pour la R.F. d'Allemagne continue à se rapporter à la situation territoriale avant le 3 octobre 1990.

LE CHOMAGE DANS LA COMMUNAUTE

Eurostat estime que, dans la Communauté européenne, le taux de chômage corrigé des variations saisonnières est de 9,9 % au mois de décembre 1992, en hausse de +0,1 % par rapport au mois de novembre 1992 et de +0,9 % par rapport au mois de décembre 1991.

La moyenne annuelle du taux de chômage dans l'ensemble de la Communauté européenne se situe à 9,5 % en 1992, en augmentation de +0,8 % par rapport à celle de l'année 1991 (8,7 %). Aux Etats-Unis, la moyenne 1992 est de 7,4 %, en augmentation de +0,7 % par rapport à 1991 (6,7 %). Au Japon (2,1 % en moyenne 1991), le taux de chômage moyen pour 1992 ne dépassera pas 2,2 %.

Pour 1992 (moyenne annuelle), le nombre des chômeurs selon la définition du BIT pour l'ensemble de la Communauté est estimé à 14,1 millions de personnes, en hausse de plus de 1,2 million par rapport à l'année précédente.

Entre 1991 et 1992, c'est en France (+168 000, +9 % d'augmentation), dans les anciens Länder de la République fédérale d'Allemagne (+100 000, +9 %), au Royaume-Uni (+547 000, +8 %) et en Espagne (+218 000, +8 %) que les augmentations les plus importantes ont eu lieu. Les Pays-Bas sont le seul Etat membre où le chômage a diminué (-27 000, -6 %).

Le taux de chômage et le nombre de chômeurs sont estimés après correction des différences dans les méthodes nationales de recensement du chômage.

La prise en compte des résultats des enquêtes trimestrielles sur les forces de travail en Italie dans le calcul du meilleur indicateur mensuel du chômage (voir page 7) a entraîné une légère révision des données publiées dans des bulletins précédents.

Le taux de chômage est estimé en extrapolant les résultats 1991 des enquêtes sur les forces de travail pour tous les Etats membres. L'introduction des résultats 1992, dès qu'ils seront disponibles, entraînera probablement une révision des estimations.

PRODUCTION INDUSTRIELLE: La situation conjoncturelle continue à se dégrader

L'évolution de la production industrielle de la Communauté européenne (EUR 12) jusqu'en octobre 1992 montre que la récession a tendance à s'aggraver. C'est surtout dans le secteur des biens d'investissement que l'on assiste à une baisse de la production. En octobre, l'indice de la production industrielle corrigé du nombre de jours ouvrables (NACE 1-4) était de 120,0 (1985 = 100) pour la Communauté européenne, ce qui correspond à un taux de variation de -1,6 % par rapport à la valeur du mois d'octobre de l'année dernière. Pour l'industrie des biens d'investissement, le taux de variation correspondant est de -4,2 %. L'indice corrigé des variations saisonnières atteint 113,0 pour octobre contre 115,0 en janvier. Par rapport à la valeur cumulée des mois de mai, juin et juillet, la production industrielle corrigée des variations saisonnières de la CE a diminué de -1,0 % au cours des trois derniers mois disponibles (août, septembre et octobre).

En ce qui concerne les différents Etats membres de la CE, les taux de variation de la production industrielle corrigée des variations saisonnières ont évolué comme suit pour les trois derniers mois par rapport aux mois précédents: (entre parenthèses: biens d'investissement): Italie -3,3 % (-2,1 %), Pays-Bas -1,6 % (-2,0 %), Belgique -1,2 % (estimation) (+1,3 %), Danemark -0,7 % (-1,8 %), Allemagne (ouest) -0,7 % (-1,1 %), Espagne -0,3 % (estimation) (+0,9 %), Grèce +0,0 % (-5,9 %), France +0,3 % (+0,4 %), Royaume-Uni +1,2 % (+0,9 %) Irlande +3,8 % (estimation) (+3,4 %). La production baisse donc dans un très grand nombre d'Etats membres.

Aux Etats-Unis, la production industrielle a stagné avec un taux de 0,0 % (taux de variation des trois derniers mois par rapport aux mois précédents); on ne dispose d'aucune donnée à jour pour le Japon.

On remarque en particulier le recul marqué de la production automobile (NACE 35) dans la CE, le taux de variation des trois derniers mois étant de -4,0 % par rapport aux mois précédents.

BALANCE DES PAIEMENTS - Tendances mondiales - chiffres préliminaires pour le second trimestre de 1992:

Détérioration de 3,2 milliards d'écus de la balance courante communautaire par rapport au second trimestre de 1991; la balance s'inscrit en déficit de 15,2 Mrds. La balance courante américaine enregistre un déficit de 12,5 Mrds d'écus, soit une détérioration de 16 Mrds d'écus. La balance courante japonaise, en excédent de 22,7 Mrds d'écus, s'améliore de 7 Mrds.

Au second trimestre de 1992, selon des chiffres préliminaires, la balance courante communautaire atteindrait un déficit de 15,2 Mrds d'écus soit une détérioration de 3,2 Mrds par rapport au second trimestre de 1991. Cette détérioration provient d'une aggravation de 7,6 Mrds d'écus du déficit des invisibles qui est contrebalancée en partie par une amélioration de 4,4 Mrds de la balance commerciale. Ces variations sont dues en grande partie à la balance allemande qui a enregistré, sur la période considérée, une amélioration de 3,5 Mrds d'écus de l'excédent commercial et une aggravation de 3,3 Mrds du solde des invisibles. La moitié de cette aggravation provient du poste voyages. On note par ailleurs une amélioration de la balance commerciale française de 2,5 Mrds et une dégradation des balances commerciales et des invisibles britanniques de 1,6 et 2 Mrds respectivement (au second trimestre de 1991, le Royaume Uni avait reçu des transferts importants liés à la guerre du Golfe).

Aux Etats Unis, le solde courant atteint un déficit de 12,5 Mrds d'écus au second trimestre de 1992 après un excédent de 3,5 Mrds sur le même trimestre de 1991. Le déficit commercial atteint 16,3 Mrds d'écus après 11 Mrds et l'excédent des invisibles 3,8 Mrds après 14,6 Mrds. La détérioration des invisibles est essentiellement imputable aux transferts qui étaient particulièrement bénéficiaires en 1991 en raison de paiements liés à la guerre du Golfe. Si on se réfère aux niveaux de 1990, le solde des invisibles américain connaîtrait plutôt une amélioration en 1992.

Au second trimestre de 1992, l'excédent courant japonais atteint 22,7 Mrds d'écus à comparer à 15,7 Mrds en 1991. L'excédent commercial s'est amélioré de 5,1 Mrds d'écus et le déficit des invisibles s'est réduit de 3,1 Mrds.

COMMERCE EXTERIEUR

Le solde extra-communautaire cumulé de janvier à septembre 1992 atteint -45,4 Mrds d'écus, marquant une amélioration de plus de 15 Mrds par rapport à la même période de l'année précédente. Les importations extra-communautaires des neuf premiers mois de 1992 sont inférieures de 1,4 % au niveau de la période correspondante de 1991, tandis que les exportations extra-communautaires observent une progression de 3,4 %.

En septembre 1992 le déficit des échanges extra-communautaires est de 4,1 Mrds d'écus, contre -7,3 Mrds d'écus en septembre 1991. Entre ces deux périodes les importations extra régressent de 4,3 %, bénéficiant de la réduction du coût d'approvisionnement de la Communauté en pétrole brut. Ce dernier reste stable en dollars par rapport à septembre 1992, mais chute de près de 13 % en écus. Les exportations extra-communautaires augmentent de 4,2 %. La différence entre taux d'évolution des exportations et des importations entre septembre 1991 et 1992 est supérieure à 8 points.

De janvier à septembre 1992 le solde commercial des Etats-Unis approche -56 Mrds d'écus, soit une dégradation de 6 Mrds comparé aux neuf premiers mois de 1991. Les importations croissent de 2,4 % en écus, plus vite que les exportations (0,6 %).

Au mois de septembre 1992, les échanges des Etats-Unis sont déficitaires de 8,1 Mrds d'écus, ce bilan s'alourdit de près d'un milliard par rapport à septembre 1991. Les importations sont en baisse de 2,4 % en écus, mais progressent de plus de 10 % en dollars. Les exportations se replient de 6 % en écus, mais augmentent de 7 % en dollars.

L'excédent du Japon cumulé depuis janvier 1992 est de 63,2 Mrds d'écus, soit 18 Mrds d'écus de plus que le solde janvier-septembre 1991. Les exportations japonaises sont en progrès de 3,2 % en écus, alors que les importations sont en recul de 8,4 %.

Le solde japonais de septembre 1992 est de 6,7 Mrds d'écus, supérieur d'1,6 Mrd d'écus à celui de septembre 1991. Les exportations stagnent en écus (-0,4 %), mais progressent de 13 % en dollars et de près de 5 % en yens. Les importations affichent une baisse de 5 % en écus, mais une hausse de 8 % en dollars, et une stagnation en yens.

En septembre 1992, l'Allemagne dégage un excédent commercial total de 2,7 Mrds d'écus, soit 2 Mrds de plus qu'en septembre 1991. Le Danemark et l'Irlande sont excédentaires chacun d'un demi-milliard d'écus. Les Pays-Bas et l'UEBL présentent des soldes proches de l'équilibre (respectivement 0,1 Mrd et -0,2 Mrd d'écus) en progrès chacun de près d'un demi-milliard d'écus. Le Portugal et la Grèce ont des bilans déficitaires de 0,7 Mrd d'écus et 0,8 Mrd d'écus. Le solde des échanges français est de -1,2 Mrd d'écus, tandis que celui de l'Italie est de -1,4 Mrd, en amélioration de 0,6 Mrd d'écus par rapport à septembre 1991. Le solde commercial total de l'Espagne s'allège de 0,3 Mrd d'écus, et atteint -1,6 Mrd en septembre 1992. Les échanges du Royaume-Uni sont les plus fortement déficitaires: -1,9 Mrd d'écus, malgré un progrès de 0,2 Mrd par rapport à septembre 1991.

„On line“-Abfrage

Jede Zeitreihe ist durch einen neunstelligen numerischen Kode gekennzeichnet, der seinerseits in Unterkodes gegliedert ist, welche – im Falle von „Eurostatistik“ – das Land, den Sektor, die Tabelle, die Einheit und die Periodizität bezeichnen.
Die Bedeutung der einzelnen Unterkodes ist der nachstehend aufgeführten Tabelle zu entnehmen.

Land XX	Sektor XX	Tabelle XXXX	Periodizität und Einheit X
06 EUR 12* 03 EUR 10 11 D* 14 F 16 I 18 NL 21 UEBL 22 B 24 L 26 UK 28 IRL 30 DK 32 E 34 GR 36 P 42 USA 46 JAP	93	Variablentabellen XXXX vierstelliger Wert, der im Titel jeder Tabelle erscheint	0 jährlich, Angaben in Prozent 1 vierteljährlich, Angaben in Prozent 2 monatlich, Angaben in Prozent 3 jährlich, Indexangaben (1985 = 100) 4 vierteljährlich, Indexangaben (1985 = 100) 5 monatlich, Indexangaben (1985 = 100) 6 jährlich, Angaben in absoluten Werten 7 vierteljährlich, Angaben in absoluten Werten 8 monatlich, Angaben in absoluten Werten 9 Gewicht, EUR 10 = 100 bzw. EUR 12 = 100

* Territoriale Aufteilung vor dem 3. 10. 90: 02 für EUR 12, 12 für D.
Beispiele: Will man die monatliche Arbeitslosigkeit (in absoluten Zahlen) von Frankreich gemäß Tabelle 0304 dieser Veröffentlichung erfahren, so braucht man nur den Kode 14 93 0304 8 einzugeben.

‘On-line’ consultation

Each time series is identified by a nine-digit code broken down into subcodes, which in the case of Eurostatistics, represent the country, sector, table unit and periodicity. The significance of the different subcodes may be found in the table below.

Country XX	Sector XX	Table XXXX	Periodicity and unit X
06 EUR 12* 03 EUR 10 11 D* 14 F 16 I 18 NL 21 UEBL 22 B 24 L 26 UK 28 IRL 30 DK 32 E 34 GR 36 P 42 USA 46 JAP	93	Table by indicator XXXX 4-digit value quoted in the title of each table	0 annual in % 1 quarterly in % 2 monthly in % 3 annual index 1985 = 100 4 quarterly index 1985 = 100 5 monthly index 1985 = 100 6 annual absolute value 7 quarterly absolute value 8 monthly absolute value 9 weighting EUR 10 = 100 or EUR 12 = 100

* data for the territorial situation before 3. 10. 90: 02 for EUR 12, 12 for D.
Consultation example: to know the monthly unemployment (absolute figures) of France as is shown in Table 0304 of this publication, the code 14 93 0304 8 should be formed.

Mode de consultation «on-line»

Chaque série chronologique est identifiée par un code à neuf chiffres structuré en sous-codes représentant, dans le cas d'Eurostatistiques, le pays, le secteur, le tableau, l'unité et la périodicité. On trouvera dans le tableau ci-dessous la signification des différents sous-codes.

Pays XX	Secteur XX	Tableau XXXX	Périodicité et unité X
06 EUR 12* 03 EUR 10 11 D* 14 F 16 I 18 NL 21 UEBL 22 B 24 L 26 UK 28 IRL 30 DK 32 E 34 GR 36 P 42 USA 46 JAP	93	Tableaux par variable XXXX valeur à 4 chiffres figurant dans le titre de chaque tableau	0 annuelle exprimée en pourcentage 1 trimestrielle exprimée en pourcentage 2 mensuelle exprimée en pourcentage 3 annuelle exprimée en indice 1985 = 100 4 trimestrielle exprimée en indice 1985 = 100 5 mensuelle exprimée en indice 1985 = 100 6 annuelle exprimée en valeur absolue 7 trimestrielle exprimée en valeur absolue 8 mensuelle exprimée en valeur absolue 9 pondération EUR 10 = 100 ou EUR 12 = 100

* données pour la situation territoriale avant le 3. 10. 90: 02 pour EUR 12, 12 pour D.
Exemple de consultation: pour connaître le chômage mensuel (chiffres absolus) de la France, tel qu'il figure au tableau 0304 de cette publication, il suffit d'appeler le code 14 93 0304 8;
